Surface & Flooring Systems

We turn bare ground and raw slab into finished space — indoors and out.

The surface creation arm of the Vastu Waterproofings group, applying the same engineering discipline to floors, pavements and outdoor surfaces that Vastu has applied to waterproofing since 2004.

01 ABOUT COREGUARD

Engineering the Surfaces You Walk, Drive & Live On

CoreGuard is the surface creation arm of the Vastu Waterproofings group — the same engineering discipline that has protected buildings since 2004, now applied to the floors, pavements and outdoor surfaces that finish them.

Vastu Waterproofings LLP has spent over 16 years as a specialist applicator of construction chemical systems — waterproofing, structural repair, thermal insulation and industrial flooring — for commercial, industrial and infrastructure clients across India.

CoreGuard was established to focus that expertise on a distinct discipline: surface creation. Where waterproofing protects a structure, surface creation finishes it — the floors people walk on, the pavements they drive over, and the outdoor spaces that need to handle both footfall and rainfall.

We work as an engineered-systems applicator, not a product brand — recommending the right system for the site rather than a fixed technique, with Sika-based systems as our primary technical foundation.

AT A GLANCE

Pan-India
service

> *Our recommendations are shaped by the project, not limited to a single technique — the same principle Vastu has applied since 2004, now built into how CoreGuard specs every floor.*

COREGUARD ENGINEERING PHILOSOPHY

AREAS OF EXPERTISE

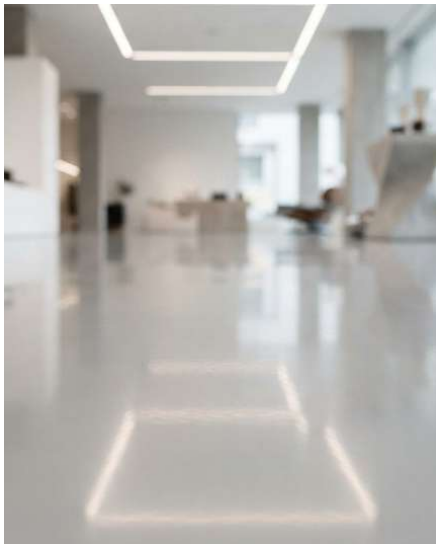

Interior epoxy flooring p.03	Liquid grinding decorative floors p.03	Vehicular & parking flooring p.03
Exterior & wet-area epoxy / PU deck flooring p.04	Permeable, granule-based paving p.04	Pathways & walkways p.04

PORTFOLIO · SECTION 02

Indoor & Decorative Flooring Systems

The surfaces people walk on every day — engineered to look finished on day one and stay that way for years.

02

INTERIOR

Epoxy Flooring

Homes · Offices · Retail · Showrooms

A seamless, jointless finish that's easy to clean and holds its shine for years. Available from high-gloss to matte, to match the space.

DECORATIVE

Liquid Grinding Floors

Lobbies · Courtyards · Feature floors, indoor & outdoor

A poured-and-ground aggregate finish — seamless, terrazzo-style, with real depth and texture. A distinctive alternative to tile or natural stone.

VEHICULAR

Parking Flooring

Surface parking · Basements · Multi-storey car parks

Heavy-duty and abrasion-resistant, built for constant vehicle movement and oil exposure, finished with clean line-marking for smooth traffic flow.

PORTFOLIO · SECTION 03

Exterior & Permeable Systems

Outdoor surfaces face sun, water and footfall together — and, done right, they can put rainwater to work instead of shedding it.

03

EXTERIOR & WET AREAS

Epoxy / PU Deck Flooring

Swimming pool decks · Terraces · Balconies

UV-stable and slip-resistant, built to take direct sun, chlorine exposure and constant foot traffic without fading or lifting.

PERMEABLE

Pervious Granule Paving

Pathways · Walkways · Open parking · Pool surrounds

Water passes straight through the surface instead of pooling on it — no puddling, no runoff, and a genuinely different look from standard paving.

OUTDOOR

Pathways & Walkways

Gardens · Podiums · Society common areas

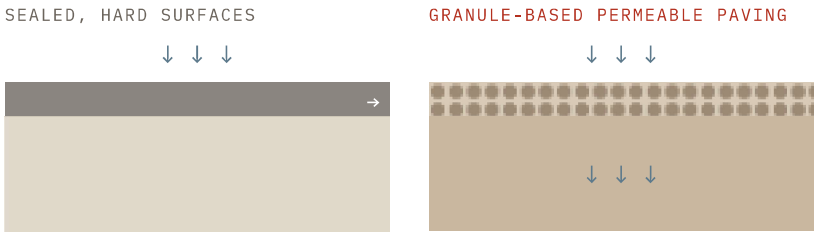

A textured, slip-safe finish rated to hold up outdoors, season after season, through sun, rain and heavy footfall.

SECTION 04

Why Permeable Surfaces Matter

Sealed, hard surfaces send rainwater straight to the storm drain. Every square metre of concrete, tile or asphalt is a square metre that no longer lets water soak into the ground beneath it.

Granule-based permeable paving works differently. Water passes straight through the surface and into the ground below — recharging groundwater, easing pressure on local drains, and reducing surface flooding during heavy rain.

It's a small material choice at the level of a single driveway or courtyard. At the scale of a housing society or campus, it changes how the whole site behaves through the monsoon.

Recharges	Groundwater, instead of sending it to the drain
Reduces	Local flooding & runoff in heavy rain
Stays	Usable minutes after the rain stops — no puddling
